

SHIELD REPAIR KIT

VERMALLOY® SHIELD REPAIR KIT

Vermillion Incorporated has developed a repair kit for our Vermalloy® cable shielding. The use of the Vermalloy® Repair Kit ensures that all repairs on Vermalloy® shielded cables provide the best functional repair while supporting the outstanding performance the cable produced before the repair. Vermalloy® is the most secure voice shielding available and used within multiple airborne platforms, both fixed wing and rotary, but can be compromised if incorrect shield materials are used in its repair.

The Vermalloy® Shield Repair is a simple and reliable solution that provides long lasting protection for field repairs. Each kit is supplied with a complete set of instructions to ensure your repair is thorough and returns your bird to action with minimal down time.

A temporary NSN will be assigned shortly, but the kit is available today. Our kit provides all of the necessary components to affix the proper repair. The tables on the back of this sheet provide a quick reference to the Sikorsky/Vermillion part numbers that are in wide use within aircraft along with their corresponding repair kit part number. If you have a number not listed and suspect it is shielded with Vermalloy® please call the factory for support.
